

Geoviz Static Presentation Project Rubric

Static Presentation Rubric (6 min)

1. Purpose & Message (5 pts)

- The visualization has a clear takeaway (what the audience should learn).
- The map/figure choices match the purpose (exploration vs. explanation).

2. Data & Integrity (5 pts)

- Data sources are appropriate and correctly represented (no misleading transformations).
- Any aggregation, normalization, or filtering is justified and documented briefly.

3. Visual Encoding & Chart/Map Type Choice (5 pts)

- Correct visualization type for the data and question (e.g., choropleth vs. proportional symbols).
- Encodings (size/color/shape) are effective and not confusing.
- Color choices support interpretation (readable, consistent, not distracting).
- Fonts are legible; typographic hierarchy is consistent (title/subtitle/labels).

4. Map Elements & Layout (5 pts)

- Strong composition: visual hierarchy, alignment, spacing, balance.
- Required elements included when appropriate: title, legend, scale bar, north arrow, labels, credits (or a clear reason if omitted).

5. Readability & Accessibility (5 pts)

- Works for common viewers: good contrast, not overly small text, avoids reliance on color alone when feasible.
- Sensible class breaks / symbol ranges; avoids clutter and overlap.
- Basemap choice and label

6. Interpretation & Caption (5 pts)

- A short caption (2-6 sentences) explains what is shown and what it means.
- Notes any key limitations/assumptions (briefly).
